

# Advancing Personalized Medicine

# About Us

GenElixir™ is established in 2019 to manufacture DNA/RNA and morpholino based antisense reagents. GenElixir aims at supplying morpholino oligos reagents to nucleotide-based companies, research laboratories, and educational institutions to enable manufacturing and discovery of antisense-based medicines.

## Our Mission

Advancing personalized medicine through manufacturing and supplying of high-quality, sustainable and affordable morpholino antisense oligos reagents. Our mission includes developing techniques to scale-up the manufacturing of morpholino oligos reagents.

# Our Projected Capabilities

 Customized design of morpholino oligos

---

 R&D to support gene therapeutics

---

 Large scale production of morpholino oligos antisense reagents

## Our Team

GenElixir's team is made of industry experts, research scientists and healthcare professionals, who work hand-in-hand in supporting the discovery and innovation of new gene therapeutics that are based on morpholino antisense reagents for treating various human diseases and medical conditions.
